Projects

PhoneUp (save your friends' details)
This is an application with PWA functionality in which the user can save, edit and delete their friends and family contacts, addresses and other details. This project was created with Vue.Js

Modiary (my diary)
The concept of the project is for every user to have their personal diary online and they could create a new diary daily, they can edit, favorite and as well delete. This project was created with Vue.Js

Github Profile Page (graphQL)
I replicated my github profile page using the github graphQL API. This task was given by the BuycoinsAfrica.

Space Tourism
This was a fun challenge from the Frontendmentor.io which shows some information about some planets in the universe. I used Vue.Js to developed this.

SunnySide
This was a fun challenge from the Frontendmentor.io.

Education

Ladoke Akintola University of Technology - B.Tech (APRIL 2022)
▶ Computer Science

Experience

Tabagoods (March 2022 – July 2022)
Tabagoods (Philadelphia, U.S)

I'm part of the team that implemented the UI designs for the e-commerce platform using Nuxt.Js. I worked together with the team for better architecture of the website and also implemented the PWA functionality. Also, I worked with my team to ensure the implementation was well connected with the backend.

Aimtoget - Intern (October 2020 – March 2021)
Aimtoget (Oyo, Nigeria)
I did my internship in this company as a frontend developer using pure vanilla javascript
